

## The Most Trusted Ophthalmology EHR System

### Medflow 8.1 EHR – Meaningful Use Stage 2 Certified and ICD-10 Ready

Medflow 8.1 Ophthalmology EHR is the industry's most trusted ophthalmology EHR system, currently being used to record more than 120,000 patient visits per day. We understand the needs of a busy eye care practice. Our system is intuitive; it works with you and helps you and your staff do your jobs faster, better, and easier. Our single screen exam workflow allows you to record all exam data in one screen without any navigation or screen flipping. Additional features include intuitive auto-fill of data, image management, and HIPAA compliance monitoring. Plus, Medflow 8.1 is Meaningful Use Stage 2-certified, ready for ICD-10 integration, and can be hosted on a server or in the cloud. But when you purchase, you don't just get the technology; you get a team of humans who educate and train you on how your specific practice can get the most out of Medflow 8.1. If you're ready to see more patients, improve patient care, and make more money, then you're ready for Medflow 8.1. Call us now or request a demo to get started!

## Medflow ASC – The Complete Ophthalmology Ambulatory EHR

Medflow Inc. understands the unique requirements of a busy ophthalmic ASC and has designed a toolset to streamline and improve the administrative and clinical processes. This sophisticated market demands a best-of-breed software product that will create better workflows and maximize your operational efficiency. The Medflow ASC software runs as a stand-alone program and it can also be interfaced directly to your enterprise practice management system. The program is extremely flexible and customizable: you can set up preference cards, surgical procedures, standing orders, RN checklists, CRNA checklists, intra-operative checklists by specialty by procedure, operative notes by

## Medflow ASC Features

### Pre-Op Nursing

The Medflow's ambulatory EHR enables pre-op nurse to enter medications, pre-op vital signs, goes through a pre-op checklist questionnaire, starts the I.V. block and fully prepares the patient for the surgical procedure with minimal clicks of a mouse. The content and workflow of the system are easily customized, each checklist is very specific and follows your current workflow. All of the documentation is automatically merged into a nursing report for signature and storage.

### Intra-Op Documentation

The intra-operative screen is fully customizable by surgeon/by procedure. It provides input areas for the circulating nurse to enter content during the procedure. The CRNA has simultaneous access to the system and is able to go to their appropriate screens to continue to document the vital signs. Once the procedure is completed, the operative note is directly generated. Each operative note is customized by surgeon/by procedure.

### PAR Calculations

PAR Score Sheet can be accessed by the CRNA and completed as part of the final documentation. This information can then be merged together into the nursing report and the anesthesia report. All of the required documents are generated immediately from the information captured at various times during the process. Medflow's ambulatory EHR is packed with various features like this.

### Workflow Management

Patient flow and managing the staging processes are critical to a busy ASC. The Medflow ASC program has a user-friendly "dashboard" screen that can be accessed from any workstation. The screen shows exactly where your patients are in the process. When a patient moves from one room to another, you simply drag the patient from that location to the new location. In/out time is stamped; you see exactly how long a patient has been in a particular given area.

## Medflow Optical – Simple, Comprehensive Optical Shop Solution

Ordering glasses and contact lenses may be a big part of your practice. That's why we created a simple, but comprehensive point-of-sale system called Medflow Optical Shop. The Medflow Optical Shop allows you and your staff to create patient orders, take payments, process insurance, and track inventory transactions quickly. You can even connect the Optical Shop to our EHR product so that patient data will populate automatically when you create new point of sale orders. Plus, the Optical Shop is compatible with barcode scanners; devices such as Essilor, m'eyeFit, and VisiOffice 1 and 2; lab software such as Eyefinity and CC Systems-Labzilla; and more!

If you're ready to transform your optics ordering process—and take your practice to the next level of running smoothly and making more money—call us now!

---

We remain confident that choosing Medflow as our EHR vendor in 2012 was the right decision for Meaningful Use, ICD-10, and PQRS, have been excellent. Developing a rapport with our Strateg that we are not simply a client, but rather
