EHR for Orthopaedics

What makes SRS the EHR of choice in orthopaedics?

- SRS has a **deep understanding of the unique, complex workflow in orthopaedics**, along with the value of productivity and speed. This is drawn from years of working closely with our [national network of orthopaedists](http://srsoft.com/orthopaedic-clients) (<http://srsoft.com/orthopaedic-clients>). That's why our EHR incorporates other applications and web-based systems right at your desktop, tablet, or smart device—because technology should always enhance specialized patient care.
- The **SRS Unified Desktop™** (<http://srsoft.com/unified-desktop>) delivers all clinical and business applications through one seamless user interface. The Unified Desktop—**SRS EHR** (<http://srsoft.com/ehr>), **PM** (<http://srsoft.com/srs-caretracker-practice-management>), and integrated **PACS** (<http://srsoft.com/srs-pacs>)—provides direct access from within the patient's chart, enhancing efficiency and productivity, and creating a smoother, easier, and less stressful working environment.
- A **state-of-the-art, cloud-based data platform** (<http://srsoft.com/srs-cloud-ehr-hosted-solution>) enables the seamless sharing of clinical data. Capture and report on data with ease, exchange information with other providers, and satisfy the requirements of the government and other payers—all while increasing efficiency and productivity, and maybe even your free time.
- SRS EHR makes **ICD-10 easy for orthopaedists**, with an [intuitive ICD-10 solution](http://srsoft.com/icd10videos) (<http://srsoft.com/icd10videos>)—no bloated templates, no heavy pointing and clicking, and no fuss. ([assets/images/products/ehr_for_orthopaedics_full.jpg](#))

- SRS EHR expertly **prepares orthopaedists for participation in current and future initiatives**, such as accountable care organizations (ACOs), subsequent stages of meaningful use, and quality reporting for PQRS and other government programs. [Q](#)

- **SRS FlexNote** (<http://srssoft.com/srs-flexnote>) **capabilities automate a large portion of orthopaedic exam-note creation** and requires only a minimal effort to complete the documentation process with essential details and the nuances for each patient. Using FlexNote, you spend less time taking notes, and more time focused on developing a successful relationship with your patients.

- SRS also offers numerous orthopaedic-based **transcription options** (<http://srssoft.com/srs-transcription>) that **enhance workflow and increase efficiency**. Templates and macros eliminate the need to dictate redundant paragraphs or blocks of text. The result is a significant gain in physician productivity and reduced transcription costs for orthopaedic practices.

- Our **implementation specialists** (<http://srssoft.com/support-and-implementation>) **are unrivaled in their knowledge of the EHR industry** in general, and the requirements for EHR success, specifically in orthopaedics. **Your practice will be fully implemented without any loss of patient volume from day one.** No other solution delivers this assurance of orthopaedic expertise, productivity, and profitability.

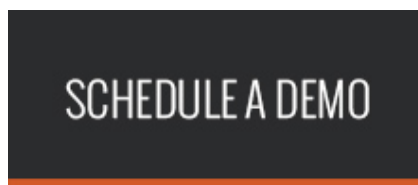

SRS is the definitive leader in productivity-enhancing EHR technology and services for orthopaedics. It's the right choice for you, and your practice, now and in the future. Orthopaedic specialists deserve The Specialist's EHR™.
