Order and Lab Management

Order and Lab Management – Lab orders, radiology tests, and in-house procedures are issued, tracked, and reconciled with SRS Order Manager to decrease paperwork dramatically and give the practice control over the entire test order process. Practices can interface with reference labs, hospital labs, in-house lab systems, and PACS systems to receive results in real- time.
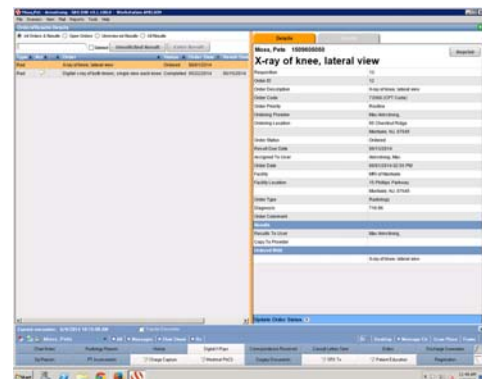

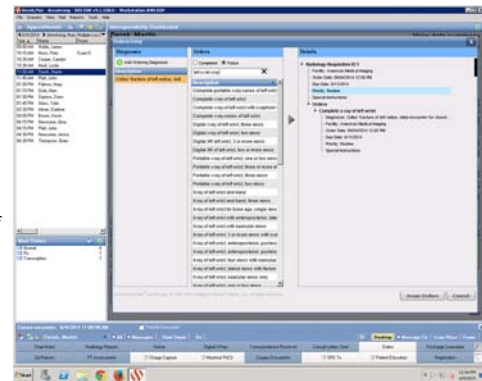

- Computerized physician order entry (CPOE) allows you to create, print, file, and track orders electronically.

- SRS v9 (the 2014 Edition of our certified EHR) provides lab connectivity through one HL7-compliant resource (clearinghouse) that has bi-directional lab connections. Order forms are pre-built and include each lab's full test menu.

- Groups of lab tests can be saved as favorites to improve staff productivity when ordering multiple lab tests, and results can be routed via the SRS Lab Interface tool to designated recipients (or pools) based on the type of result.

- Lab results are automatically filed in the correct patient chart, and full integration with the Messaging and Tasking feature ensures results appear in the physician's inbox—along with the patient chart—and a notification is sent to the physician and ancillary staff when results are ready for review and digital signature.

- A quick overview of patient care with a snapshot view of all tests and dates administered is provided, and, where applicable, a direct link to the result appears.

- An order aging report facilitates documented follow-up on all overdue tests, and order matching removes pending results from the aging report.

- The rules engine accurately routes normal, abnormal, and preliminary lab results.

- Lab values are automatically databased and available for export via CCD record, and preliminary reports are managed to save time and eliminate confusion caused by duplicate reports.

Benefits:

- **Enhanced physician productivity** – automates the test ordering process and alerts the physician as soon as results arrive

- **Enhanced patient care** – tracks test results and patient compliance and visually identifies lab values that are outside the normal range

- **Reduced malpractice/legal exposure** – facilitates follow-up with patients and/or providers

- **Increased practice efficiency** – eliminates manual handling, routing, and filing of test results
